

The **National Center for Biomedical Research and Training (NCBRT)** at **Louisiana State University** invites you to join us for a unique training opportunity. The NCBRT is offering the following Department of Homeland Security (DHS) certified course:

# Community Healthcare Planning and Response to Disasters

## MGT-409

When an entire community is affected by a large-scale incident involving mass casualties such as a natural disaster, a pandemic outbreak, or a terrorist attack, response activities require integration of emergency management, healthcare providers, public health officials, public safety officials, and other agencies operating in a community. Large-scale incidents are likely to overwhelm healthcare systems and communities must work together to address the needs of an overwhelming number of patients. Community Healthcare Planning and Response to Disasters will prepare communities to effectively plan for, respond to, and recover from this type of scenario.

The target audience for this course includes the healthcare provider community and responders to healthcare incidents. Traditional first responders and agencies that do not have a traditional response role, but may have one in the event of a large-scale incident, should attend this course.

Each delivery should be comprised of an integrated audience. The audience should include approximately equal representation from the following functional groups: healthcare, public safety, public health, and emergency preparedness. Several activities will rely on the varied expertise and experiences of the audience to provide information about their planning considerations and response roles.
